

PUBLIC INFORMATION

Did you know?

- Cashmere has 3 levees that protect homeowners, businesses and city infrastructure from flooding. You are standing on one right now.
- Levees deteriorate over time and must be maintained to remain effective. Lack of maintenance prevents the system from performing as intended and could potentially lead to failure.
- The City of Cashmere is responsible for maintaining the levees.
- To benefit from federal disaster assistance, the city is required to properly maintain the levees to specific standards.

Why are the trees marked?

- The marked trees may pose a higher threat to the levee system and cause failure or prevent the system from performing as intended.
- Trees that become unstable can damage a levee, or they may even destroy parts of the levee if they fall. When levees are damaged, results can be catastrophic.

What's next?

- The City of Cashmere and Chelan County's Flood Control Zone District are cooperatively developing a Levee Vegetation Management Plan. Trees identified as potentially hazardous will require further assessment before any future action is taken.
